

FIRST VERSION

DECENTRALIZED EXCHANGE WITH EXTRA POWERS.

One-click, More swaps, Less fees.

LITEPAPER

INTRODUCTION.

1.0

3Swap is a Dex built on various EVM compatible chains that allows you to swap not one but two tokens for another with little or no fees. Besides from the flexibility and speed of swapping two tokens for one, 3Swap allows liquidity providers to earn more by giving an option to provide liquidity across three tokens. 3Swap is DeFi 1.0 renovated at the cost of nothing.

PROBLEMS AND SOLUTION

2.0

FLEXIBILITY

Pioneer Dexes like Uniswap and Pancakeswap allow swaps of two tokens on the same chain. In a decentralized world where there are various cross-chain innovations, the present approach to decentralized exchange is passing away with time, hence the need for this solution.

3Swap allows you to swap across multiple chains in one click.

SPEED

3Swap is built to swap all three tokens in one click at a faster speed than it would take the known dexes to swap two.

Unlike other Dexes, the multichain capability of 3Swap takes out the hassle of bridging tokens from one chain to another before running a transaction. You want to swap two for one, you do so instantly.

MULTI-CHAIN COMPATIBILITY

3Swap Dex is built on top of various EVM compatible chains thus making it a possibility to swap tokens meeting various specifications (ERC20, BEP20, HRC20) on a single platform.

FEES

Network fee has been a concern on the ether blockchain and that has made most traders shy away from transactions on the ether chain.

Conventional Dexes charge higher when swapping but 3Swap does it less for more tokens. So basically, you pay less the price swapping two tokens for three.

CORRECTIONS

3.0

SCALABILITY

This would be increased as our dex gets utilized. Optimization and flexibility are key for us.

OPEN DEVELOPMENT PLATFORM

Our codes would be open source to allow modification and upgrade made to our dapp to better improve scalability and durability.

INCENTIVES AND REWARDS

3Swap rewards users of our decentralized exchange with our native token:-

We reward the following set of users:

- Users who provide liquidities using three tokens
- Buyers and sellers who facilitate price differences
- Early adopters of our project
- Creator who mint NFTs on our decentralized exchange

ROAD MAP

4.O

TOKEN

5.O

Sap token is the native token for 3swap dex. The sap token would be used as a governance token, so holders can participate in decisions on how the platform is run. The token would also be used as a

currency in our NFT marketplace. Users can transact in our marketplace using the 3Swap token(SAP).

TOKEN SALE

The 3Swap token sale is divided into 3:- Private Sale, Initial Public Sale and Grand Public Sale.

TOKENOMICS

3Swap (SAP)

Total supply: 1,000,000,000 SAP

TOKEN ALLOCATION

3Swap tokens have a maximum total supply of 1 billion.

With so many utilities and deflationary supply, the possibility of owning a position is enormous.

\$0.008 per SAP token for the private sale.
\$0.008 per SAP token for the initial public sale.
\$0.01 per SAP token for grand public sale.

Token sales: 26%
Liquidity: 1%
Team: 18%
Research & partnerships: 5%
Marketing: 6%
Staking, liquidity mining rewards e.t.c: 44%
